

Cumulus® Release Notes

Cumulus Java Classes 6.6.1

Cumulus Java Classes 6.6.x are designed for Cumulus Workgroup and Enterprise version 6.6. They support Cumulus 6.6 features and cannot be used with any Cumulus Server version prior to 6.6. If you use a Cumulus Server version 6.5, use the most recent version of Cumulus Java Classes 6.5.x. If you use a Cumulus Server version prior to 6.5, use the most recent version of Cumulus Java Classes 6.0.x.

Cumulus Java Classes version 6.6.1 is an update release in which various bugs have been fixed. For details concerning the new features and the bugs that have been fixed with this release, please refer to the following list:

- Changed the return value of `Cumulus.getVersion()` to "6.6.1".
- Fixed an "Unspecified Error" while cataloging.
- Fixed `Field.setValue(Object)` which was crashing the application when passing a null value. Passing a null value is now clearing the value as if `Field.clearValue()` was called.
- Fixed `Record.copyAssetTo(Asset)` which could crash the application.
- Fixed `Record.copyAssetTo(File)` which could crash the application.
- Fixed `Record.moveAssetTo(Asset)` which could crash the application.
- Fixed `Record.moveAssetTo(File)` which could crash the application.
